

CHM102 Basic Organic Chemistry

Problem Set 1

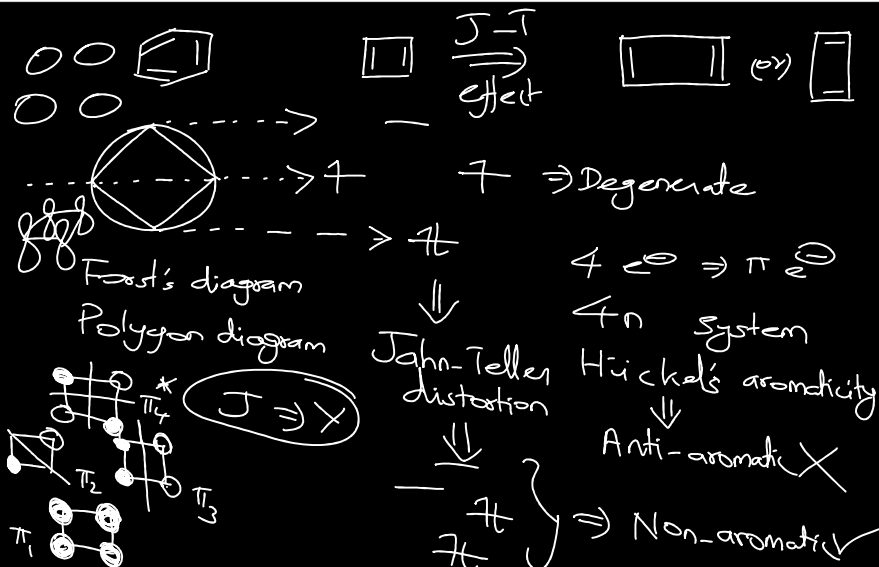

Q1. Identify the molecule with higher dipole moment and indicate the reason.

Q2. Two cyclic peroxides (A and B) are shown. (i) Identify the IUPAC names of these compounds. (ii) Among these, the bis-peroxide B is more stable than monoperoxide A. Why?

Q3. Draw the frontier molecular orbitals of (i) benzene, (ii) 1,3,5,7-octatetraene and (iii) cyclobutadiene.

Q3. Draw the frontier molecular orbitals of (i) benzene, (ii) 1,3,5,7-octatetraene and (iii) cyclobutadiene.
