

1. Denote the regression line of y on x by L_1 . Here x is the independent variable and y is the dependent variable. Reversing their roles, denote the regression line of x on y by L_2 . Is $L_1 = L_2$? When is $L_1 = L_2$?
2. Among the Biology premajor students whose data is available in Our-Own-Data-MS24, find the ones who are influential points for the linear regression analysis of weight on height. Recognize your data and determine if your (height, weight) is an influential point?
3. A fortune teller says that the sum of digits of students room numbers impacts the duration of their sleep. Use Our-Own-Data-MS24 to argue with this fortune teller.
4. A cricket ball is thrown. Write a sample space for the outcomes, based on cricket rule book.
5. A fair die is thrown until 6 appears. Write the sample space of the numbers appearing in these throws. What if the die is not fair? Are the two probability spaces same?
